 **COLTENE**

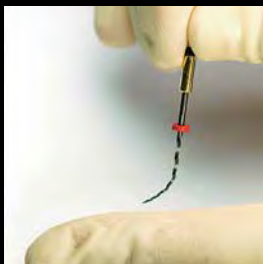

ROOT CANAL SHAPING

# HyFlex™ CM

## THE NEW NITI FILE GENERATION

**HyFlex™ Controlled Memory NiTi Files** have been manufactured utilising a unique process that controls the material's memory.

**Regains shape  
after heat  
treatment  
= Multi-use**

### My Rotary instruments of choice

*"HyFlex™ CM files by COLTENE have been my rotary instruments of choice for over six years now due to their many superior features, including controlled memory and exceptional fatigue resistance," says Dr Byron Tsivos, an endodontist at The Square Dental Referral Clinic.*

*"The files can also be precurved, used in difficult canals and can be returned to their original shape with heat treatment.*

*Further to this, HyFlex™ CM files have been shown to be superior on apical extrusion of debris and have less dentinal cracks than other files, not to mention that they eliminate transportation problems and retain original anatomy in a way that I have never seen with another instrument.*

*I would definitely recommend."*

**Dr Byron Tsivos**  
The Square Dental  
Referral Clinic

## HyFlex™ CM

- High flexibility
- Extreme resistance to fracture
- Centred canal preparation
- HyFlex NiTi have a built in shape memory

STAYS ON TRACK

# HyFlex™ EDM

THE NEW NITI FILE GENERATION

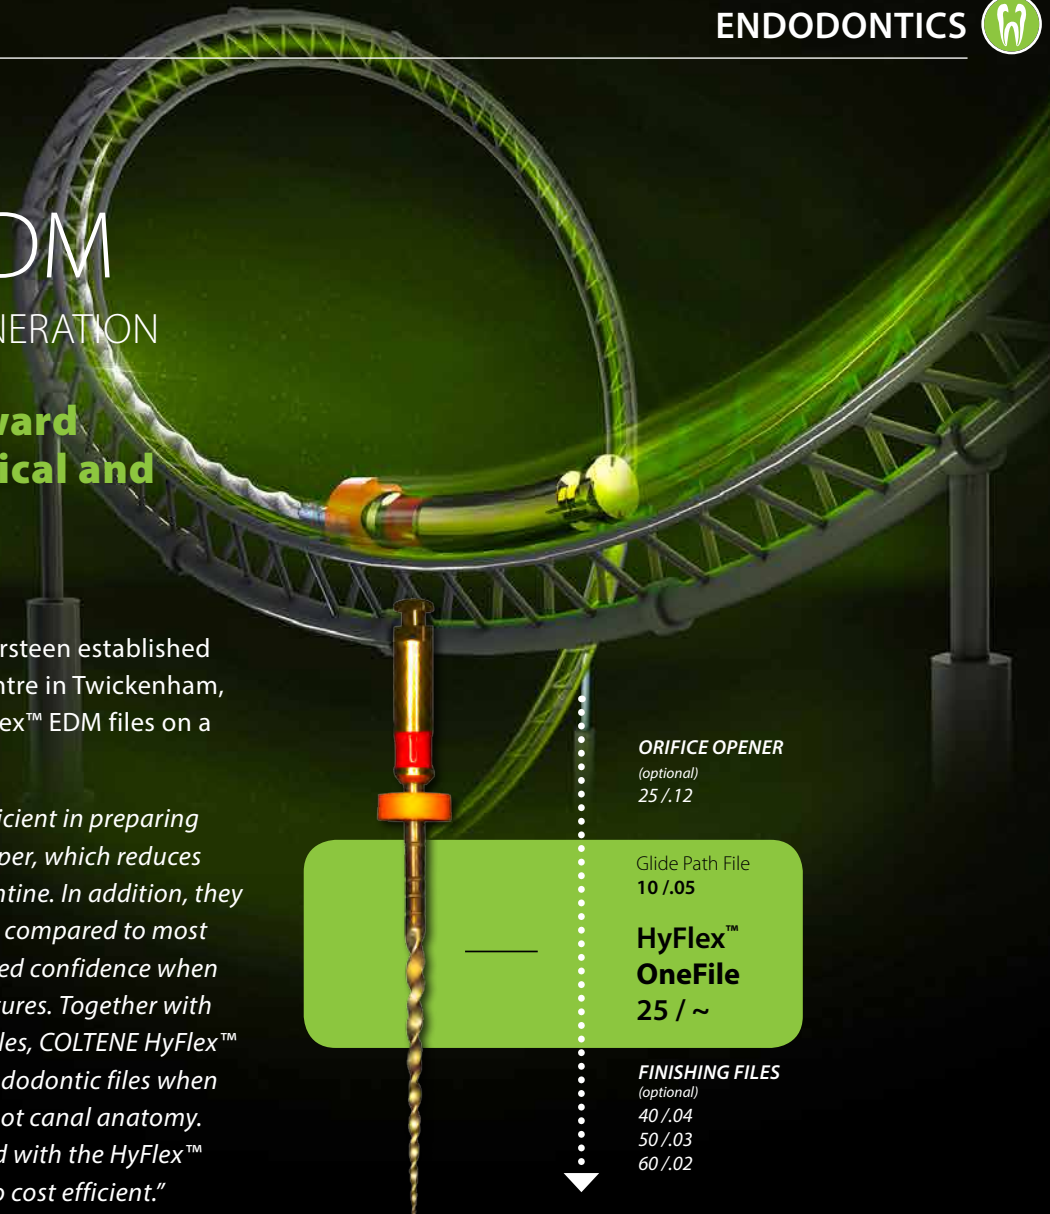

**Makes straight forward cases more economical and time saving**

Endodontic specialist Dr Nicolai Orsteen established the Root Canal Dental Referral Centre in Twickenham, Richmond. He used COLTENE HyFlex™ EDM files on a recent case. He says:

*“COLTENE HyFlex™ EDM files are efficient in preparing canals. They have a conservative taper, which reduces unnecessary removal of coronal dentine. In addition, they have a very high fracture resistance compared to most other rotary files. This gives me added confidence when preparing canals with severe curvatures. Together with the extraordinary flexibility of the files, COLTENE HyFlex™ EDM files are my choice of rotary endodontic files when preparing teeth with challenging root canal anatomy. Straight canals can be instrumented with the HyFlex™ 25 OneFile 25mm only, which is also cost efficient.”*

EXPANSION MEETS ADHESION

# roeko GuttaFlow™ 2

GuttaFlow 2 is a filling system for obturation of root canals containing two products in one: Guttapercha in the form of powder with a particle size smaller than 30 µm and a sealer. This filling system works with cold, flowable Guttapercha.

- Excellent flow properties
- Almost no solubility
- Dense occlusion of the root canal
- Very good tissue compatibility
- Reinfection protection
- Optimal radiopacity
- Precise root post preparation possible

CLINICAL EVALUATION

#### Clinicians' Comments

*"Nice viscosity. It is easy to mix, very smooth, and flows well."*

*"Esthetic, with a nice range of cement shades."*

*"A great multi-use product."*

*"SoloCem is reliable, offers simplicity and is easy to use."*

*"The really small tips are great for access and placement."*

*"The procedure time is fast, since there is no need to etch and bond."*

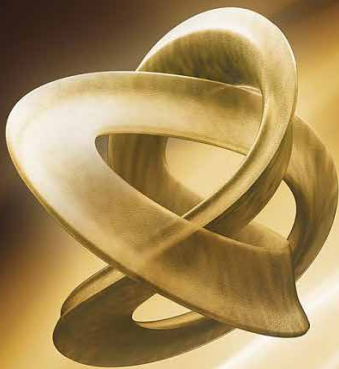

*"I like the inclusion of zinc oxide as a potential anti-bacterial agent."*

#### Indications

- Permanent cementation of ceramic, metal and composite crowns, bridges, inlays and onlays.
- Cementation of implant abutments (zirconium oxide and titanium).
- Cementation of all types of endodontic posts.

#### Unique Features

- One-step resin cement.
- Contains MDP and 4-MET(A) monomers for strong adhesion.
- Contains zinc oxide, which is antibacterial.
- Well-balanced mechanical properties.

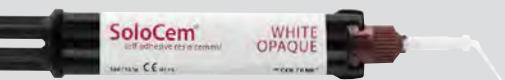

STRONG AND LONG LASTING  
CEMENTATION

**SAVE 30% on all refills**

**DuoCem** is a dual curing resin cement in 5ml-automix syringes, available in Dentin Trans and White Opaque. Thanks to the excellent technical values and the easy handling DuoCem is perfect for daily work in a dental practice.

#### Areas of application

- Permanent cementing of crowns, bridges, inlays, onlays (ceramic, metal, composite)
- Permanent cementing of root posts of all types

#### Advantages

- Strong technical and mechanical values
- Optimised flowability
- Automix-syringe and ready to use mixing tips
- Intra-oral processing time of about 60 seconds
- Easy clean up (after 3 seconds light curing)
- Fluorescent

LIGHT-CURING SINGLE-COMPONENT UNIVERSAL BOND

# ONE COAT 7 UNIVERSAL

- Self Etch, Selective Etch and Total Etch, a bond for all adhesive techniques
- With activator for chemically curing products
- Exceptional bonding values on enamel and dentine
- Excellent marginal seal and outstanding marginal leakage tightness
- Ergonomically shaped, triangular bottle with dropper for fine dosing

**Clinicians' Comments**

*"Easy to apply in a very thin layer. The viscosity is good."*

*"Great versatility. Multi-purpose and I like that it bonds to all types of surfaces."*

*"No offensive odor."*

*"One drop is plenty. This bonding agent goes a long way and coats the area well."*

*"I like that it's clear, antibacterial and doesn't require etching first."*

HIGH-PERFORMANCE COMPOSITE BLOC FOR PERMANENT RESTORATIONS

# BRILLIANT Crios®

The new BRILLIANT Crios Reinforced Composite Blocks combine all advantages of an innovative submicron hybrid composite material for the CAD/CAM chairside manufacturing process - CEREC - to achieve a reliable, aesthetic and permanent restoration without an additional glazing process.

- Tooth-like behaviour
- Can be modified and repaired
- Reliable Luting System

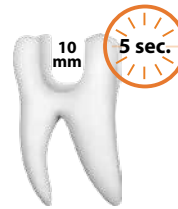

*"The material doesn't require a separate firing process and is very easy to use, so provides a quick and durable restorative solution. The material also boasts high flexural strength, a tooth-like modulus of elasticity and minimal polymerisation shrinkage, which creates a shock-absorbing effect and ensures maximum resistance against fractures of both the remaining tooth and the restoration."*

FLOWABLE DUAL CURING POSTERIOR  
BULK FILL RESTORATIVE MATERIAL

**“** Given the move towards less amalgam use there is going to be greater need for suitable alternative materials and composite resin will lead the way. There are likely to be increased use of novel techniques including bulk-fill restorative materials. Fill-Up is one such material that allows rapid cavity filling, easy finishing and a reasonable wear resistance with simple top-up and repair options for long-term maintenance **”**

**Professor Brian Millar**

# Fill-Up!®

**In a single step to give a perfect result**

- Optimal depth polymerisation with minimal shrinkage due to dual curing system.
- Guaranteed single-layer technique - even in very deep cavities.
- Optimised sealing of margins - reduced post-operative sensitivity
- Universal shade in a convenient Automix syringe for efficient placement

- Ideal handling through smooth consistency
- Good wettability on tooth substance

**DA DENTAL ADVISOR™ 96%**

**CLINICAL EVALUATION**  
Clinicians' Comments

•“Excellent consistency and handling. It is easy to dispense, flows well and doesn't slump.”

•“Packs well, good marginal adaptation and can be sculpted.”

•“Great chameleon-like properties and one of the easiest composites to finish that I've tried.”

•“Great polishability!”

•“Blends well. The blended shade is brilliant for that one patient who's in between shades.”

•“Love all the shade options.”

“Compared to other products on the market, nothing comes close to the BRILLIANT EverGlow's® surface polish and gloss retention – it's why I started working with it, and why I'll continue to use the material for the foreseeable future.”

**Dr Monik Vasant** BChD MFGDP (UK) MSc

(1 x pre-polisher and 1 high lustre)

## TEMPORARY RESTORATIONS

# Coltosol® F

## Economical & reliable

Coltosol F is a temporary, eugenol-free filling material. The ease of use and the self-curing under the action of saliva make Coltosol F an ideal filling material for temporary fillings and temporary root canal sealings. Available in shade Universal White.

- Fluoride-releasing, X-ray opaque
- Easy adaption and adhesion in the cavity
- No mixing, easy to remove
- Self-curing under the action of saliva

POLYMERISATION LAMP

# S.P.E.C 3 LED®

- Adjustable intensity depending on the clinical situation
  1. Standard mode = 1600 mW/cm<sup>2</sup>  
2 mm layer thickness composite cures in only 5 seconds!
  2. 3K mode = 3000 – 3500 mW/cm<sup>2</sup>  
2 mm layer thickness composite cures in only 1 second!
  3. Ortho mode for orthodontists = 3000 – 3500 mW/cm<sup>2</sup>  
cures the mounting elements of the entire tooth arch in 23 second intervals per element
- Highest light performance for rapid and safe polymerisation
- Reliable result through safe depth polymerisation (particularly crucial for bulk fillings!)
- No wasted chair time
- Allows focused work of dental assistants through shortened exposure times (reduced risk of wobbling of the polymerisation lamp in the work field)
- Handy and attractive design with high quality aluminium housing
- High performance lithium polymer battery, replaceable

### S.P.E.C. 3 LED Kit

60013943

- 1 × Handpiece
- 1 × Light guide, clear 8 mm
- 2 × Light shields
- 1 × Eye protection shield
- 1 × Charger base, protective covers

## MULTILAYER DIAMOND INSTRUMENTS

# DIATECH<sup>®</sup>

Multiple layered diamond instruments have a uniform coverage of natural diamond on different levels, especially at the all-important tip.

New diamond grits with sharp edges will, therefore, be exposed for use during procedures as the outer layer wears.

**Contact your COLTENE  
Territory Manager  
for the DIATECH  
REFERENCE CHART.**

## DIATECH® COMPOSITE PREPARATION AND FINISHING KIT

This kit comprises 12 Multilayer FG Diamonds in 2 different grit sizes, 2 Silicone polishers and 1 polishing brush for contra-angles. The diamond coated cutting surface of these instruments is pointed at an angle of approximately 95°. The range of applications of these diamonds covers trimming, contouring and finishing the occlusal surfaces of composite restorations and finishing porcelain inlays and onlays chairside. The polisher as well as the polishing brushes provide the surface with a tooth-like enamel gloss.

Art# 250059AA

## DIATECH® UNIVERSAL SHAPING & FINISHING KIT

This finishing kit comprises 8 Multilayer FG diamonds for contouring and 6 Multilayer FG diamonds for finishing amalgam, composite, compomer, porcelain, glassionomer and gold restorations. DIATECH fine grit Multilayer diamonds are highly efficient and will not harm the surface of the restoration nor the adjacent tooth structure. We owe it to your high grade restorations!
